Correction of: <https://formative.jmir.org/2026/1/e71717>

JMIR Form Res 2026;10:e98838; doi: [10.2196/98838](https://doi.org/10.2196/98838)

In “Additional Investigations and Referrals by Primary Care Physicians in Uncertain Clinical Situations: Cross-Sectional Study Using Virtual Patient–Based Scenarios” [1], the authors noted three corrections.

In [Table 1](#), where it says:

Table 1.

	Total (N=40)	<10 years of experience (n=20)	>10 years of experience (n=20)
Number of AIRs, mean (SD)	10.3 (3.7)	11.5 (3.5)	9.2 (3.7)

The data are corrected as follows (presented here as [Table 2](#)):

Table 2.

	Total (N=40)	<10 years of experience (n=20)	>10 years of experience (n=20)
Number of AIRs, mean (SD)	9.2 (3.6)	10.2 (3.4)	8.1 (3.7)

In the results section, where it says:

They requested an average of 10.3 additional investigations and referrals (SD 3.6; minimum 1 to maximum 16), with 34 different proposals.

The text has been replaced with:

They requested an average of 9.2 additional investigations and referrals (SD 3.6; minimum 1 to maximum 16), with 34 different proposals.

In the results section, where it says:

Participants with less than 10 years of professional experience ordered fewer additional investigations and referrals on average: 10.2 (SD 3.4; 95% CI 8.9-11.7) vs 8.1 (SD 3.7; 95% CI 6.5-9.9; P=.02).

The text has been replaced with:

Participants with less than 10 years of professional experience ordered more additional investigations and

referrals on average: 10.2 (SD 3.4; 95% CI 8.9-11.7) vs 8.1 (SD 3.7; 95% CI 6.5-9.9; P=.03).

These corrections will appear in the online version of the paper on the JMIR Publications website together with the publication of this correction notice. Because this was made after submission to PubMed, PubMed Central, and other full-text repositories, the corrected article has also been resubmitted to those repositories.
