</ItemDef>
What is your age?

What is the highest level of education that you have completed?

What is your current annual household income from all sources, before taxes?

Do you know anyone who has been diagnosed with Alzheimer's disease? This can include a family member, relative, close friend, acquaintance, co-worker, etc. If you knew someone with Alzheimer's disease, but they are now deceased, then you may respond 'yes' to this question.

Please think about your own health today. Specifically, think about how you are walking, how you washed or dressed yourself this morning, how you have been doing normal activities such as working or studying, whether you are affected by pain or discomfort, and whether you are anxious or depressed. Now, please answer the questions below about your own health today.
Please think about your own health today. Specifically, think about how you are walking, how you washed or dressed yourself this morning, how you have been doing normal activities such as working or studying, whether you are affected by pain or discomfort, and whether you are anxious or depressed. Now, please answer the questions below about your own health today.

**MOBILITY**
Please choose the best option which describes how you are walking today:

**SELF CARE**
Please choose the best option which describes how you washed or dressed yourself this morning:

**USUAL ACTIVITIES** (e.g. work, study, housework, family, or leisure activities)
Please choose the best option which describes how you have been doing usual activities such as working or studying today:
Please choose the best option which describes how you have been doing usual activities such as working or studying today:

Please choose the best option which describes your level of pain or discomfort today:

Please read the following options and choose the one that best describes your level of anxiety or depression today:

Alzheimer's disease - Description 

If you have Alzheimer's disease...

1) You might forget recent events of importance to you. For example, if you are interested in hockey, then you might forget whether your favorite team won their last game, although you may remember watching the game itself.

2) You might forget the names of people you met recently, or the names of local streets.

3) You may no longer be able to handle your personal finances or plan leisure activities such as dinner parties or vacations. Simple decisions such as what to order in restaurants might become difficult to make. Your ability to concentrate may decrease and you might have difficulty driving.

4) You may start having trouble finding words to express your thoughts. You might need to be reminded to shower or brush your teeth, but you could do these activities on your own. You may need to post notes around the home to remind you of simple things like turning off the stove.
5) You may remain aware of the day and your surroundings. You might be able to travel to familiar locations like the supermarket, although probably with the help of a loved one or friend. If you are in a social gathering, then you might have difficulty following the conversation.

6) You may continue to enjoy hobbies such as puzzles or reading.
On the following pages, you will be asked to answer several questions. Please answer these questions as if you have Alzheimer’s disease according to the summary you just read. The summary will be available on top of each set of questions. Please click Next Page below to go to the questions.

Alzheimer’s disease - Description #[no]

If you have Alzheimer’s disease...

1) You might forget recent events of importance to you. For example, if you are interested in hockey, then you might forget whether your favorite team won their last game, although you may remember watching the game itself.

2) You might forget the names of people you met recently, or the names of local streets.

3) You may no longer be able to handle your personal finances or plan leisure activities such as dinner parties or vacations. Simple decisions such as what to order in restaurants might become difficult to make. Your ability to concentrate may decrease and you might have difficulty driving.
4) You may start having trouble finding words to express your thoughts. You might need to be reminded to shower or brush your teeth, but you could do these activities on your own. You may need to post notes around the home to remind you of simple things like turning off the stove.

5) You may remain aware of the day and your surroundings. You might be able to travel to familiar locations like the supermarket, although probably with the help of a loved one or friend. If you are in a social gathering, then you might have difficulty following the conversation.

6) You may continue to enjoy hobbies such as puzzles or reading.

Now consider two possible lives. In Life A, you will live in perfect health for 20 years and then you will die of natural causes. In Life B, you will live in perfect health for the next 10 years, then you will live with Alzheimer’s disease as described in the summary for another 10 years, and then you will die of natural causes.
5) You may remain aware of the day and your surroundings. You might be able to travel to familiar locations like the supermarket, although probably with the help of a loved one or friend. If you are in a social gathering, then you might have difficulty following the conversation.

6) You may continue to enjoy hobbies such as puzzles or reading.

Now consider two possible lives. In Life A, you will live in perfect health for 20 years and then you will die of natural causes. In Life B, you will live in perfect health for the next 10 years, then you will live with Alzheimer’s disease as described in the summary for another 10 years, and then you will die of natural causes.
Do you prefer Life A or Life B, or do you think Life A and Life B are the same as one another?

If you have Alzheimer's disease...
1) You might forget recent events of importance to you. For example, if you are interested in hockey, then you might forget whether your favorite team won their last game, although you may remember watching the game itself.

2) You might forget the names of people you met recently, or the names of local streets.

3) You may no longer be able to handle your personal finances or plan leisure activities such as dinner parties or vacations. Simple decisions such as what to order in restaurants might become difficult to make. Your ability to concentrate may decrease and you might have difficulty driving.

4) You may start having trouble finding words to express your thoughts. You might need to be reminded to shower or brush your teeth, but you could do these activities on your own. You may need to post notes around the home to remind you of simple things like turning off the stove.

5) You may remain aware of the day and your surroundings. You might be able to travel to familiar locations like the supermarket, although probably with the help of a loved one or friend. If you are in a social gathering, then you might have difficulty following the conversation.

6) You may continue to enjoy hobbies such as puzzles or reading.

Now consider two possible lives. In Life A, you will live in perfect health for 17.5 years and then you will die of natural causes. In Life B, you will live in perfect health for the next 10 years, then you will live with Alzheimer's disease as described in the summary for another 10 years, and then you will die of natural causes.
2) You might forget the names of people you met recently, or the names of local streets.

3) You may no longer be able to handle your personal finances or plan leisure activities such as dinner parties or vacations. Simple decisions such as what to order in restaurants might become difficult to make. Your ability to concentrate may decrease and you might have difficulty driving.

4) You may start having trouble finding words to express your thoughts. You might need to be reminded to shower or brush your teeth, but you could do these activities on your own. You may need to post notes around the home to remind you of simple things like turning off the stove.

5) You may remain aware of the day and your surroundings. You might be able to travel to familiar locations like the supermarket, although probably with the help of a loved one or friend. If you are in a social gathering, then you might have difficulty following the conversation.

6) You may continue to enjoy hobbies such as puzzles or reading.

Do you prefer Life A or Life B, or do you think Life A and Life B are the same as one another?

If you have Alzheimer's disease...

1) You might forget recent events of importance to you. For example, if you are interested in hockey, then you might forget whether your favorite team won their last game, although you may remember watching the game itself.

2) You might forget the names of people you met recently, or the names of local streets.

3) You may no longer be able to handle your personal finances or plan leisure activities such as dinner parties or vacations. Simple decisions such as what to order in restaurants might become difficult to make. Your ability to concentrate may decrease and you might have difficulty driving.

4) You may start having trouble finding words to express your thoughts. You might need to be reminded to shower or brush your teeth, but you could do these activities on your own. You may need to post notes around the home to remind you of simple things like turning off the stove.

5) You may remain aware of the day and your surroundings. You might be able to travel to familiar locations like the supermarket, although probably with the help of a loved one or friend. If you are in a social gathering, then you might have difficulty following the conversation.

6) You may continue to enjoy hobbies such as puzzles or reading.
Now consider two possible lives. In Life A, you will live in perfect health for 14.5 years and then you will die of natural causes. In Life B, you will live in perfect health for the next 10 years, then you will live with Alzheimer's disease as described in the summary for another 10 years, and then you will die of natural causes.

In Life B, you will live in perfect health for the next 10 years, then you will live with Alzheimer's disease as described in the summary for another 10 years, and then you will die of natural causes.

If you have Alzheimer's disease...

1) You might forget recent events of importance to you. For example, if you are interested in hockey, then you might forget whether your
favorite team won their last game, although you may remember watching the game itself.

2) You might forget the names of people you met recently, or the names of local streets.

3) You may no longer be able to handle your personal finances or plan leisure activities such as dinner parties or vacations. Simple decisions such as what to order in restaurants might become difficult to make. Your ability to concentrate may decrease and you might have difficulty driving.

4) You may start having trouble finding words to express your thoughts. You might need to be reminded to shower or brush your teeth, but you could do these activities on your own. You may need to post notes around the home to remind you of simple things like turning off the stove.

5) You may remain aware of the day and your surroundings. You might be able to travel to familiar locations like the supermarket, although probably with the help of a loved one or friend. If you are in a social gathering, then you might have difficulty following the conversation.

6) You may continue to enjoy hobbies such as puzzles or reading.

Now consider two possible lives. In Life A, you will live in perfect health for 13.5 years and then you will die of natural causes. In Life B, you will live in perfect health for the next 10 years, then you will live with Alzheimer's disease as described in the summary for another 10 years, and then you will die of natural causes.

Q:

1) What is the cause of death in Life A?

A:

Death from natural causes.

B:

Death from Alzheimer's disease.

C:

Death from a disease not specified in the summary.

D:

Death from heart disease.

E:

Death from a disease not specified in the summary.

2) What is the duration of Life A?

A:

13.5 years.

B:

10 years.

C:

23.5 years.

D:

20 years.

E:

30 years.

3) What is the duration of Life B?

A:

10 years.

B:

20 years.

C:

30 years.

D:

40 years.

E:

50 years.

4) Is Alzheimer's disease a preventable disease?

A:

Yes, Alzheimer's disease can be prevented by maintaining a healthy lifestyle.

B:

No, it is a disease that cannot be prevented.

C:

Yes, it can be prevented with early diagnosis and treatment.

D:

No, it is not preventable.

E:

Yes, it can be prevented with genetic counseling.

5) How does Alzheimer's disease affect a person's ability to concentrate?

A:

Concentration improves.

B:

Concentration decreases.

C:

Concentration increases.

D:

Concentration remains the same.

E:

Concentration is not affected.

6) What activities might be difficult for a person with Alzheimer's disease?

A:

Shoe tying.

B:

Brushing teeth.

C:

Lifting utensils.

D:

Cutting food.

E:

None of the above.

7) What is the disease that causes memory loss?

A:

Alzheimer's disease.

B:

Parkinson's disease.

C:

Multiple sclerosis.

D:

Rheumatoid arthritis.

E:

None of the above.

8) What is the disease that causes memory loss?

A:

Alzheimer's disease.

B:

Parkinson's disease.

C:

Multiple sclerosis.

D:

Rheumatoid arthritis.

E:

None of the above.

9) What is the disease that causes memory loss?

A:

Alzheimer's disease.

B:

Parkinson's disease.

C:

Multiple sclerosis.

D:

Rheumatoid arthritis.

E:

None of the above.

10) What is the disease that causes memory loss?

A:

Alzheimer's disease.

B:

Parkinson's disease.

C:

Multiple sclerosis.

D:

Rheumatoid arthritis.

E:

None of the above.

11) What is the disease that causes memory loss?

A:

Alzheimer's disease.

B:

Parkinson's disease.

C:

Multiple sclerosis.

D:

Rheumatoid arthritis.

E:

None of the above.
Do you prefer Life A or Life B, or do you think Life A and Life B are the same as one another?
If you have Alzheimer's disease...

1) You might forget recent events of importance to you. For example, if you are interested in hockey, then you might forget whether your favorite team won their last game, although you may remember watching the game itself.

2) You might forget the names of people you met recently, or the names of local streets.

3) You may no longer be able to handle your personal finances or plan leisure activities such as dinner parties or vacations. Simple decisions such as what to order in restaurants might become difficult to make. Your ability to concentrate may decrease and you might have difficulty driving.

4) You may start having trouble finding words to express your thoughts. You might need to be reminded to shower or brush your teeth, but you could do these activities on your own. You may need to post notes around the home to remind you of simple things like turning off the stove.

5) You may remain aware of the day and your surroundings. You might be able to travel to familiar locations like the supermarket, although probably with the help of a loved one or friend. If you are in a social gathering, then you might have difficulty following the conversation.

6) You may continue to enjoy hobbies such as puzzles or reading.

Now consider two possible lives. In Life A, you will live in perfect health for 12 years and then you will die of natural causes. In Life B, you will live in perfect health for the next 10 years, then you will live with Alzheimer's disease as described in the summary for another 10 years, and then you will die of natural causes.
Alzheimer's disease - Description #

If you have Alzheimer's disease...

1) You might forget recent events of importance to you. For example, if you are interested in hockey, then you might forget whether your favorite team won their last game, although you may remember watching the game itself.

2) You might forget the names of people you met recently, or the names of local streets.

3) You may no longer be able to handle your personal finances or plan leisure activities such as dinner parties or vacations. Simple decisions such as what to order in restaurants might become difficult to make. Your ability to concentrate may decrease and you might have difficulty driving.

4) You may start having trouble finding words to express your thoughts. You might need to be reminded to shower or brush your teeth, but you could do these activities on your own. You may need to post notes around the home to remind you of simple things like turning off the stove.

5) You may remain aware of the day and your surroundings. You might be able to travel to familiar locations like the supermarket, although probably with the help of a loved one or friend. If you are in a social gathering, then you might have difficulty following the conversation.

6) You may continue to enjoy hobbies such as puzzles or reading.

Do you prefer Life A or Life B, or do you think Life A and Life B are the same as one another?

Alzheimer's disease - Description #[no]

1) You might forget recent events of importance to you. For example, if you are interested in hockey, then you might forget whether your favorite team won their last game, although you may remember watching the game itself.

2) You might forget the names of people you met recently, or the names of local streets.

3) You may no longer be able to handle your personal finances or plan leisure activities such as dinner parties or vacations. Simple decisions such as what to order in restaurants might become difficult to make. Your ability to concentrate may decrease and you might have difficulty driving.

4) You may start having trouble finding words to express your thoughts. You might need to be reminded to shower or brush your teeth, but you could do these activities on your own. You may need to post notes around the home to remind you of simple things like turning off the stove.

5) You may remain aware of the day and your surroundings. You might be able to travel to familiar locations like the supermarket, although probably with the help of a loved one or friend. If you are in a social gathering, then you might have difficulty following the conversation.

6) You may continue to enjoy hobbies such as puzzles or reading.
Now consider two possible lives. In Life A, you will live in perfect health for 5.5 years and then you will die of natural causes. In Life B, you will live in perfect health for the next 10 years, then you will live with Alzheimer’s disease as described in the summary for another 10 years, and then you will die of natural causes.

Alzheimer’s disease - Description #[no]

1) You might forget recent events of importance to you. For example, if you are interested in hockey, then you might forget whether your favorite team won their last game, although you may remember watching the game itself.

5) You may remain aware of the day and your surroundings. You might be able to travel to familiar locations like the supermarket, although probably with the help of a loved one or friend. If you are in a social gathering, then you might have difficulty following the conversation.

6) You may continue to enjoy hobbies such as puzzles or reading.

Now consider two possible lives. In Life A, you will live in perfect health for 3.5 years and then you will die of natural causes. In Life B, you will live in perfect health for the next 10 years, then you will live with Alzheimer's disease as described in the summary for another 10 years, and then you will die of natural causes.
If you have Alzheimer's disease...

1) You might forget recent events of importance to you. For example, if you are interested in hockey, then you might forget whether your favorite team won their last game, although you may remember watching the game itself.

2) You might forget the names of people you met recently, or the names of local streets.

3) You may no longer be able to handle your personal finances or plan leisure activities such as dinner parties or vacations. Simple decisions such as what to order in restaurants might become difficult to make. Your ability to concentrate may decrease and you might have difficulty driving.

4) You may start having trouble finding words to express your thoughts. You might need to be reminded to shower or brush your teeth, but you could do these activities on your own. You may need to post notes around the home to remind you of simple things like turning off the stove.

5) You may remain aware of the day and your surroundings. You might be able to travel to familiar locations like the supermarket, although probably with the help of a loved one or friend. If you are in a social gathering, then you might have difficulty following the conversation.

6) You may continue to enjoy hobbies such as puzzles or reading.

Please read the summary below, which describes what life is like to have Alzheimer's disease.

If you have Alzheimer's disease...

1) You might forget or mix up the names of your grandchildren or in-laws, but you may remember the names of your spouse and children. Sometimes you may not know the date or day of the week. You may also forget where you are now or what you did recently. You might misplace common items like your glasses or the toothpaste.

2) You may lose interest in doing many of the things that you once liked to do. You are unlikely to drive and may have difficulty using public transit on your own. If you do go out, then someone might have to guide you the entire time. You may not follow the flow of conversations in social gatherings.

3) You would need help with things like choosing what clothing to wear, using the telephone or computer, paying bills, cleaning house, buying groceries, preparing meals, or taking medications. You might be able to get dressed, eat, and use the toilet on your own. You may experience behavior and mood changes, such as becoming outgoing and talkative if you were once shy, or vice versa. You are probably incapable of making simple decisions like what to do on the weekend.

4) You may still enjoy activities like listening to music or watching television. You may remember things that happened long ago, such as buying a doll with your mother or waking up at dawn to go to hockey practice with your father.
If you have Alzheimer's disease...

If you have Alzheimer’s disease...
2) You may lose interest in doing many of the things that you once liked to do. You are unlikely to drive and may have difficulty using public transit on your own. If you do go out, then someone might have to guide you the entire time. You may not follow the flow of conversations in social gatherings.

3) You would need help with things like choosing what clothing to wear, using the telephone or computer, paying bills, cleaning house, buying groceries, preparing meals, or taking medications. You might be able to get dressed, eat, and use the toilet on your own. You may experience behavior and mood changes, such as becoming outgoing and talkative if you were once shy, or vice versa. You are probably incapable of making simple decisions like what to do on the weekend.

4) You may still enjoy activities like listening to music or watching television. You may remember things that happened long ago, such as buying a doll with your mother or waking up at dawn to go to hockey practice with your father.

Now consider two possible lives. In Life A, you will live in perfect health for 15 years and then you will die of natural causes. In Life B, you will live in perfect health for the next 10 years, then you will live with Alzheimer’s disease as described in the summary for another 10 years, and then you will die of natural causes.

If you have Alzheimer’s disease...

1) You might forget or mix up the names of your grandchildren or in-laws, but you may remember the names of your spouse and children. Sometimes you may not know the date or day of the week. You may also forget where you are now or what you did recently. You might misplace common items like your glasses or the toothpaste.

2) You may lose interest in doing many of the things that you once liked to do. You are unlikely to drive and may have difficulty using public transit on your own. If you do go out, then someone might have to guide you the entire time. You may not follow the flow of conversations in social gatherings.

3) You would need help with things like choosing what clothing to wear, using the telephone or computer, paying bills, cleaning house,
buying groceries, preparing meals, or taking medications. You might be able to get dressed, eat, and use the toilet on your own. You may experience behavior and mood changes, such as becoming outgoing and talkative if you were once shy, or vice versa. You are probably incapable of making simple decisions like what to do on the weekend.

4) You may still enjoy activities like listening to music or watching television. You may remember things that happened long ago, such as buying a doll with your mother or waking up at dawn to go to hockey practice with your father.

Now consider two possible lives. In Life A, you will live in perfect health for 15 years and then you will die of natural causes. In Life B, you will live in perfect health for the next 10 years, then you will live with Alzheimer’s disease as described in the summary for another 10 years, and then you will die of natural causes.
Do you prefer Life A or Life B, or do you think Life A and Life B are the same as one another?

Sometimes you may not know the date or day of the week. You may also forget where you are now or what you did recently. You might misplace common items like your glasses or the toothpaste.

2) You may lose interest in doing many of the things that you once liked to do. You are unlikely to drive and may have difficulty using public transit on your own. If you do go out, then someone might have to guide you the entire time. You may not follow the flow of conversations in social gatherings.

3) You would need help with things like choosing what clothing to wear, using the telephone or computer, paying bills, cleaning house, buying groceries, preparing meals, or taking medications. You might be able to get dressed, eat, and use the toilet on your own. You may experience behavior and mood changes, such as becoming outgoing and talkative if you were once shy, or vice versa. You are probably incapable of making simple decisions like what to do on the weekend.

4) You may still enjoy activities like listening to music or watching television. You may remember things that happened long ago, such as buying a doll with your mother or waking up at dawn to go to hockey practice with your father.

Now consider two possible lives. In Life A, you will live in perfect health for 19 years and then you will die of natural causes. In Life B, you will live in perfect health for the next 10 years, then you will live with Alzheimer’s disease as described in the summary for another 10 years, and then you will die of natural causes.
to guide you the entire time. You may not follow the flow of conversations in social gatherings.

3) You would need help with things like choosing what clothing to wear, using the telephone or computer, paying bills, cleaning house, buying groceries, preparing meals, or taking medications. You might be able to get dressed, eat, and use the toilet on your own. You may experience behavior and mood changes, such as becoming outgoing and talkative if you were once shy, or vice versa. 4) You may still enjoy activities like listening to music or watching television. You may remember things that happened long ago, such as buying a doll with your mother or waking up at dawn to go to hockey practice with your father.

Now consider two possible lives. In Life A, you will live in perfect health for 19 years and then you will die of natural causes. In Life B, you will live in perfect health for the next 10 years, then you will live with Alzheimer's disease as described in the summary for another 10 years, and then you will die of natural causes.

Now consider two possible lives. In Life A, you will live in perfect health for 19 years and then you will die of natural causes. In Life B, you will live in perfect health for the next 10 years, then you will live with Alzheimer's disease as described in the summary for another 10 years, and then you will die of natural causes.
Do you prefer Life A or Life B, or do you think Life A and Life B are the same as one another?
Alzheimer's disease - Description #[no2]

If you have Alzheimer's disease...

1) You might forget or mix up the names of your grandchildren or in-laws, but you may remember the names of your spouse and children. Sometimes you may not know the date or day of the week. You may also forget where you are now or what you did recently. You might misplace common items like your glasses or the toothpaste.

2) You may lose interest in doing many of the things that you once liked to do. You are unlikely to drive and may have difficulty using public transit on your own. If you do go out, then someone might have to guide you the entire time. You may not follow the flow of conversations in social gatherings.

3) You would need help with things like choosing what clothing to wear, using the telephone or computer, paying bills, cleaning house, buying groceries, preparing meals, or taking medications. You might be able to get dressed, eat, and use the toilet on your own. You may experience behavior and mood changes, such as becoming outgoing and talkative if you were once shy, or vice versa. You are probably incapable of making simple decisions like what to do on the weekend.

4) You may still enjoy activities like listening to music or watching television. You may remember things that happened long ago, such as buying a doll with your mother or waking up at dawn to go to hockey practice with your father.

Now consider two possible lives. In Life A, you will live in perfect health for 17.5 years and then you will die of natural causes. In Life B, you will live in perfect health for the next 10 years, then you will live with Alzheimer's disease as described in the summary for another 10 years, and then you will die of natural causes.

If you have Alzheimer's disease...

1) You might forget or mix up the names of your grandchildren or in-laws, but you may remember the names of your spouse and children. Sometimes you may not know the date or day of the week. You may also forget where you are now or what you did recently. You might misplace common items like your glasses or the toothpaste.

2) You may lose interest in doing many of the things that you once liked to do. You are unlikely to drive and may have difficulty using public transit on your own. If you do go out, then someone might have to guide you the entire time. You may not follow the flow of conversations in social gatherings.

3) You would need help with things like choosing what clothing to wear, using the telephone or computer, paying bills, cleaning house, buying groceries, preparing meals, or taking medications. You might be able to get dressed, eat, and use the toilet on your own. You may experience behavior and mood changes, such as becoming outgoing and talkative if you were once shy, or vice versa. You are probably incapable of making simple decisions like what to do on the weekend.
4) You may still enjoy activities like listening to music or watching television. You may remember things that happened long ago, such as buying a doll with your mother or waking up at dawn to go to hockey practice with your father.

Now consider two possible lives. In Life A, you will live in perfect health for 13 years and then you will die of natural causes. In Life B, you will live in perfect health for the next 10 years, then you will live with Alzheimer's disease as described in the summary for another 10 years, and then you will die of natural causes.

1) You might forget or mix up the names of your grandchildren or in-laws, but you may also remember the names of your spouse and children. Sometimes you may not know the date or day of the week. You may also forget where you are now or what you did recently. You might misplace common items like your glasses or the toothpaste.

2) You may lose interest in doing many of the things that you once liked to do. You are unlikely to drive and may have difficulty using public transit on your own. If you do go out, then someone might have
to guide you the entire time. You may not follow the flow of conversations in social gatherings.

3) You would need help with things like choosing what clothing to wear, using the telephone or computer, paying bills, cleaning house, buying groceries, preparing meals, or taking medications. You might be able to get dressed, eat, and use the toilet on your own. You may experience behavior and mood changes, such as becoming outgoing and talkative if you were once shy, or vice versa. You are probably incapable of making simple decisions like what to do on the weekend.

4) You may still enjoy activities like listening to music or watching television. You may remember things that happened long ago, such as buying a doll with your mother or waking up at dawn to go to hockey practice with your father.

Now consider two possible lives. In Life A, you will live in perfect health for 13.5 years and then you will die of natural causes. In Life B, you will live in perfect health for the next 10 years, then you will live with Alzheimer’s disease as described in the summary for another 10 years, and then you will die of natural causes.
talkative if you were once shy, or vice versa. You are probably incapable of making simple decisions like what to do on the weekend.

Now consider two possible lives. In Life A, you will live in perfect health for 13.5 years and then you will die of natural causes. In Life B, you will live in perfect health for the next 10 years, then you will live with Alzheimer's disease as described in the summary for another 10 years, and then you will die of natural causes.
Do you prefer Life A or Life B, or do you think Life A and Life B are the same as one another?

Alzheimer's disease - Description #[no2]
If you have Alzheimer's disease...
1) You might forget or mix up the names of your grandchildren or in-laws, but you may remember the names of your spouse and children. Sometimes you may not know the date or day of the week. You may also forget where you are now or what you did recently. You might misplace common items like your glasses or the toothpaste.

2) You may lose interest in doing many of the things that you once liked to do. You are unlikely to drive and may have difficulty using public transit on your own. If you do go out, then someone might have to guide you the entire time. You may not follow the flow of conversations in social gatherings.

3) You would need help with things like choosing what clothing to wear, using the telephone or computer, paying bills, cleaning house, buying groceries, preparing meals, or taking medications. You might be able to get dressed, eat, and use the toilet on your own. You may experience behavior and mood changes, such as becoming outgoing and talkative if you were once shy, or vice versa. You are probably incapable of making simple decisions like what to do on the weekend.

4) You may still enjoy activities like listening to music or watching television. You may remember things that happened long ago, such as buying a doll with your mother or waking up at dawn to go to hockey practice with your father.

Now consider two possible lives. In Life A, you will live in perfect health for 12 years and then you will die of natural causes. In Life B, you will live in perfect health for the next 10 years, then you will live with Alzheimer’s disease as described in the summary for another 10 years, and then you will die of natural causes.

If you have Alzheimer’s disease...
1) You might forget or mix up the names of your grandchildren or in-laws, but you may remember the names of your spouse and children. Sometimes you may not know the date or day of the week. You may also forget where you are now or what you did recently. You might misplace common items like your glasses or the toothpaste.
2) You may lose interest in doing many of the things that you once liked to do. You are unlikely to drive and may have difficulty using...
public transit on your own. If you do go out, then someone might have
to guide you the entire time. You may not follow the flow of
conversations in social gatherings.

3) You would need help with things like choosing what clothing to
wear, using the telephone or computer, paying bills, cleaning house,
buying groceries, preparing meals, or taking medications. You might be
able to get dressed, eat, and use the toilet on your own. You may
experience behavior and mood changes, such as becoming outgoing and
talkative if you were once shy, or vice versa. You are probably
incapable of making simple decisions like what to do on the weekend.

4) You may still enjoy activities like listening to music or watching
television. You may remember things that happened long ago, such as
buying a doll with your mother or waking up at dawn to go to hockey
practice with your father.

Now consider two possible lives. In Life A, you will live in perfect
health for 12 years and then you will die of natural causes. In Life
B, you will live in perfect health for the next 10 years, then you
will live with Alzheimer\#039;s disease as described in the summary
for another 10 years, and then you will die of natural causes.

Do you prefer Life A or Life B, or do you think Life A and Life B are the same as one another?
If you have Alzheimer's disease...

1) You might forget or mix up the names of your grandchildren or in-laws, but you may remember the names of your spouse and children. Sometimes you may not know the date or day of the week. You may also forget where you are now or what you did recently. You might misplace common items like your glasses or the toothpaste.

2) You may lose interest in doing many of the things that you once liked to do. You are unlikely to drive and may have difficulty using public transit on your own. If you do go out, then someone might have to guide you the entire time. You may not follow the flow of conversations in social gatherings.

3) You would need help with things like choosing what clothing to wear, using the telephone or computer, paying bills, cleaning house, buying groceries, preparing meals, or taking medications. You might be able to get dressed, eat, and use the toilet on your own. You may experience behavior and mood changes, such as becoming outgoing and talkative if you were once shy, or vice versa. You are probably incapable of making simple decisions like what to do on the weekend.

4) You may still enjoy activities like listening to music or watching television. You may remember things that happened long ago, such as buying a doll with your mother or waking up at dawn to go to hockey practice with your father.

Now consider two possible lives. In Life A, you will live in perfect health for 11 years and then you will die of natural causes. In Life B, you will live in perfect health for the next 10 years, then you will live with Alzheimer's disease as described in the summary for another 10 years, and then you will die of natural causes.

Alzheimer's disease - Description #[no2]

If you have Alzheimer's disease...

1) You might forget or mix up the names of your grandchildren or in-laws, but you may remember the names of your spouse and children. Sometimes you may not know the date or day of the week. You may also forget where you are now or what you did recently. You might misplace common items like your glasses or the toothpaste.

2) You may lose interest in doing many of the things that you once liked to do. You are unlikely to drive and may have difficulty using public transit on your own. If you do go out, then someone might have to guide you the entire time. You may not follow the flow of conversations in social gatherings.

3) You would need help with things like choosing what clothing to wear, using the telephone or computer, paying bills, cleaning house, buying groceries, preparing meals, or taking medications. You might be
able to get dressed, eat, and use the toilet on your own. You may experience behavior and mood changes, such as becoming outgoing and talkative if you were once shy, or vice versa. You are probably incapable of making simple decisions like what to do on the weekend.

4) You may still enjoy activities like listening to music or watching television. You may remember things that happened long ago, such as buying a doll with your mother or waking up at dawn to go to hockey practice with your father.

Now consider two possible lives. In Life A, you will live in perfect health for 6 years and then you will die of natural causes. In Life B, you will live in perfect health for the next 10 years, then you will live with Alzheimer's disease as described in the summary for another 10 years, and then you will die of natural causes.

1) You might forget or mix up the names of your grandchildren or in-laws, but you may remember the names of your spouse and children. Sometimes you may not know the date or day of the week. You may also forget where you are now or what you did recently. You might misplace common items like your glasses or the toothpaste.

2) You may lose interest in doing many of the things that you once liked to do. You are unlikely to drive and may have difficulty using public transit on your own. Do you prefer Life A or Life B, or do you think Life A and Life B are the same as one another?

If you have Alzheimer’s disease...

1) You might forget or mix up the names of your grandchildren or in-laws, but you may remember the names of your spouse and children. Sometimes you may not know the date or day of the week. You may also forget where you are now or what you did recently. You might misplace common items like your glasses or the toothpaste.

2) You may lose interest in doing many of the things that you once liked to do. You are unlikely to drive and may have difficulty using public transit on your own. If you do go out, then someone might have to guide you the entire time. You may not follow the flow of conversations in social gatherings.
3) You would need help with things like choosing what clothing to wear, using the telephone or computer, paying bills, cleaning house, buying groceries, preparing meals, or taking medications. You might be able to get dressed, eat, and use the toilet on your own. You may experience behavior and mood changes, such as becoming outgoing and talkative if you were once shy, or vice versa. You are probably incapable of making simple decisions like what to do on the weekend.

4) You may still enjoy activities like listening to music or watching television. You may remember things that happened long ago, such as buying a doll with your mother or waking up at dawn to go to hockey practice with your father.

Now consider two possible lives. In Life A, you will live in perfect health for 7 years and then you will die of natural causes. In Life B, you will live in perfect health for the next 10 years, then you will live with Alzheimer's disease as described in the summary for another 10 years, and then you will die of natural causes.

You might be able to get dressed, eat, and use the toilet on your own. You may experience behavior and mood changes, such as becoming outgoing and talkative if you were once shy, or vice versa. You are probably incapable of making simple decisions like what to do on the weekend.
4) You may still enjoy activities like listening to music or watching television. You may remember things that happened a long time ago, such as buying a doll with your mother or waking up at dawn to go to hockey practice with your father.

Now consider two possible lives. In Life A, you will live in perfect health for 9.5 years and then you will die of natural causes. In Life B, you will live in perfect health for the next 10 years, then you will live with Alzheimer's disease as described in the summary for another 10 years, and then you will die of natural causes.
Alzheimer's disease - Description #[no2]

If you have Alzheimer's disease...

1) You might forget or mix up the names of your grandchildren or in-laws, but you may remember the names of your spouse and children. Sometimes you may not know the date or day of the week. You may also forget where you are or what you did recently. You might misplace common items like your glasses or the toothpaste.

2) You may lose interest in doing many of the things that you once liked to do. You are unlikely to drive and may have difficulty using public transit on your own. If you do go out, then someone might have to guide you the entire time. You may not follow the flow of conversations in social gatherings.

3) You would need help with things like choosing what clothing to wear, using the telephone or computer, paying bills, cleaning house, buying groceries, preparing meals, or taking medications. You might be able to get dressed, eat, and use the toilet on your own. You may experience behavior and mood changes, such as becoming outgoing and talkative if you were once shy, or vice versa. You are probably incapable of making simple decisions like what to do on the weekend.
4) You may still enjoy activities like listening to music or watching television. You may remember things that happened long ago, such as buying a doll with your mother or waking up at dawn to go to hockey practice with your father.

Now consider two possible lives. In Life A, you will live in perfect health for 8.5 years and then you will die of natural causes. In Life B, you will live in perfect health for the next 10 years, then you will live with Alzheimer's disease as described in the summary for another 10 years, and then you will die of natural causes.

Do you prefer Life A or Life B, or do you think Life A and Life B are the same as one another?

Alzheimer's disease - Description 

1) You might forget or mix up the names of your grandchildren or in-laws, but you may remember the names of your spouse and children. Sometimes you may not know the date or day of the week. You may also forget where you are now or what you did recently. You might misplace common items like your glasses or the toothpaste.

2) You may lose interest in doing many of the things that you once liked to do. You are unlikely to drive and may have difficulty using public transit on your own. If you do go out, then someone might have to guide you the entire time. You may not follow the flow of conversations in social gatherings.

3) You would need help with things like choosing what clothing to wear, using the telephone or computer, paying bills, cleaning house, buying groceries, preparing meals, or taking medications. You might be able to get dressed, eat, and use the toilet on your own. You may experience behavior and mood changes, such as becoming outgoing and...
talkative if you were once shy, or vice versa. You are probably incapable of making simple decisions like what to do on the weekend.

4) You may still enjoy activities like listening to music or watching television. You may remember things that happened long ago, such as buying a doll with your mother or waking up at dawn to go to hockey practice with your father.

Now consider two possible lives. In Life A, you will live in perfect health for 4 years and then you will die of natural causes. In Life B, you will live in perfect health for the next 10 years, then you will live with Alzheimer's disease as described in the summary for another 10 years, and then you will die of natural causes.

Alzheimer's disease - Description #[no2]

Do you prefer Life A or Life B, or do you think Life A and Life B are the same as one another?

If you have Alzheimer's disease...

1) You might forget or mix up the names of your grandchildren or in-laws, but you may remember the names of your spouse and children. Sometimes you may not know the date or day of the week. You may also forget where you are now or what you did recently. You might misplace common items like your glasses or the toothpaste.

2) You may lose interest in doing many of the things that you once liked to do. You are unlikely to drive and may have difficulty using public transit on your own. If you do go out, then someone might have to guide you the entire time. You may not follow the flow of conversations in social gatherings.

3) You would need help with things like choosing what clothing to wear, using the telephone or computer, paying bills, cleaning house, buying groceries, preparing meals, or taking medications. You might be able to get dressed, eat, and use the toilet on your own. You may experience behavior and mood changes, such as becoming outgoing and talkative if you were once shy, or vice versa. You are probably incapable of making simple decisions like what to do on the weekend.

4) You may still enjoy activities like listening to music or watching television. You may remember things that happened long ago, such as buying a doll with your mother or waking up at dawn to go to hockey practice with your father.

Now consider two possible lives. In Life A, you will live in perfect health for 2 years and then you will die of natural causes. In Life B, you will live in perfect health for the next 10 years, then you will live with Alzheimer's disease as described in the summary for another 10 years, and then you will die of natural causes.
public transit on your own. If you do go out, then someone might have to guide you the entire time. You may not follow the flow of conversations in social gatherings.

MOBILITY
Please choose the best option which describes how you are walking today:

SELF CARE
Please choose the best option which describes how you washed or dressed yourself this morning:

USUAL ACTIVITIES (e.g. work, study, housework, family, or leisure activities)
Please choose the best option which describes how you have been doing usual activities such as working or studying today:
USUAL ACTIVITIES (e.g. work, study, housework, family, or leisure activities)

Please choose the best option which describes how you have been doing usual activities such as working or studying today:

**PAIN/ DISCOMFORT**

Please choose the best option which describes your level of pain or discomfort today:

**ANXIETY/ DEPRESSION**

Please read the following options and choose the one that best describes your level of anxiety or depression today:

**You have successfully completed 50% of the survey. Please click **Submit** in the next page to proceed.**
Please click "Submit" in the next page to proceed.

You have successfully completed 75% of the survey. Please click "Submit" in the next page to proceed.

You have successfully completed the survey. Please call the interviewer.

Did the participant experience any difficulties during the interview?

Please describe these difficulties.
Alzheimer's disease - Description #[no3]

If you have Alzheimer's disease...

1) You may be unable to do one or more of several basic chores on your own, including eating, dressing, bathing, toileting, looking after personal hygiene, or walking. You would probably need full-time help with what you cannot do and you would be unable to live alone. You may be incontinent.

2) You may experience agitated behaviour, such as struggling with the person who is trying to bathe or dress you, even if this person is your spouse or child. You may forget one or more important details of your life, including your birthday, wedding anniversary, spouse's name, or your children's names.

3) You may know who you are and what your name is; you might recognize your spouse and children without knowing exactly who they are. You may not know the day, date, or season of the year, and you may be unaware of where you are.

4) You might be unable to go outside on your own and you may be too sick to be taken anywhere. Your ability to speak, as well as to hold and understand conversations, might be extremely limited. You are probably incapable of doing any chores or hobbies. You would probably not be able to make simple decisions like where to sit or what to do with your day.
5) You may enjoy certain foods or passive activities like listening to music.

Please read the summary below, which describes what life is like to have Alzheimer's disease.

1) You may be unable to do one or more of several basic chores on your own, including eating, dressing, bathing, toileting, looking after personal hygiene, or walking. You would probably need full-time help with what you cannot do and you would be unable to live alone. You may be incontinent.

2) You may experience agitated behaviour, such as struggling with the person who is trying to bathe or dress you, even if this person is your spouse or child. You may forget one or more important details of your life, including your birthday, wedding anniversary, spouse's name, or your children's names.

3) You may know who you are and what your name is; you might recognize your spouse and children without knowing exactly who they are. You may not know the day, date, or season of the year, and you may be unaware of where you are.

4) You might be unable to go outside on your own and you may be too sick to be taken anywhere. Your ability to speak, as well as to hold and understand conversations, might be extremely limited. You are probably incapable of doing any chores or hobbies. You would probably not be able to make simple decisions like where to sit or what to do with your day.

5) You may enjoy certain foods or passive activities like listening to music.
On the following pages, you will be asked to answer several questions. Please answer these questions as if you have Alzheimer’s disease according to the summary you just read. The summary will be available on top of each set of questions. Please click Next Page below to go to the questions.

If you have Alzheimer’s disease...

1) You may be unable to do one or more of several basic chores on your own, including eating, dressing, bathing, toileting, looking after personal hygiene, or walking. You would probably need full-time help with what you cannot do and you would be unable to live alone. You may be incontinent.

2) You may experience agitated behaviour, such as struggling with the person who is trying to bathe or dress you, even if this person is your spouse or child. You may forget one or more important details of your life, including your birthday, wedding anniversary, spouse’s name, or your children’s names.

3) You may know who you are and what your name is; you might recognize your spouse and children without knowing exactly who they are. You may not know the day, date, or season of the year, and you may be unaware of where you are.

4) You might be unable to go outside on your own and you may be too sick to be taken anywhere. Your ability to speak, as well as to hold and understand conversations, might be extremely limited. You are
probably incapable of doing any chores or hobbies. You would probably not be able to make simple decisions like where to sit or what to do with your day.

5) You may enjoy certain foods or passive activities like listening to music.

Now consider two possible lives. In Life A, you will live in perfect health for 20 years and then you will die of natural causes. In Life B, you will live in perfect health for the next 10 years, then you will live with Alzheimer’s disease as described in the summary for another 10 years, and then you will die of natural causes.

If you have Alzheimer’s disease...

1) You may be unable to do one or more of several basic chores on your own, including eating, dressing, bathing, toileting, looking after personal hygiene, or walking. You would probably need full-time help with what you cannot do and you would be unable to live alone. You may be incontinent.

2) You may experience agitated behaviour, such as struggling with the person who is trying to bathe or dress you, even if this person is your spouse or child. If you have Alzheimer's disease...
1) You may be unable to do one or more of several basic chores on your own, including eating, dressing, bathing, toileting, looking after personal hygiene, or walking. You would probably need full-time help with what you cannot do and you would be unable to live alone. You may be incontinent.

2) You may experience agitated behaviour, such as struggling with the person who is trying to bathe or dress you, even if this person is your spouse or child. You may forget one or more important details of your life, including your birthday, wedding anniversary, spouse’s name, or your children’s names.

3) You may know who you are and what your name is; you might recognize your spouse and children without knowing exactly who they are. You may not know the day, date, or season of the year, and you may be unaware of where you are.

4) You might be unable to go outside on your own and you may be too sick to be taken anywhere. Your ability to speak, as well as to hold and understand conversations, might be extremely limited. You are probably incapable of doing any chores or hobbies. You would probably not be able to make simple decisions like where to sit or what to do with your day.

5) You may enjoy certain foods or passive activities like listening to music.

Now consider two possible lives. In Life A, you will live in perfect health for 15.5 years and then you will die of natural causes. In Life B, you will live in perfect health for the next 10 years, then you will live with Alzheimer’s disease as described in the summary for another 10 years, and then you will die of natural causes.
2) You may experience agitated behaviour, such as struggling with the person who is trying to bathe or dress you, even if this person is your spouse or child. You may forget one or more important details of your life, including your birthday, wedding anniversary, spouse’s name, or your children’s names.

3) You may know who you are and what your name is; you might recognize your spouse and children without knowing exactly who they are. You may not know the day, date, or season of the year, and you may be unaware of where you are.

4) You might be unable to go outside on your own and you may be too sick to be taken anywhere. Your ability to speak, as well as to hold and understand conversations, might be extremely limited. You are probably incapable of doing any chores or hobbies. You would probably not be able to make simple decisions like where to sit or what to do with your day.

5) You may enjoy certain foods or passive activities like listening to music.

Now consider two possible lives. In Life A, you will live in perfect health for 15.5 years and then you will die of natural causes. In Life B, you will live in perfect health for the next 10 years, then you will live with Alzheimer’s disease as described in the summary for another 10 years, and then you will die of natural causes.
Do you prefer Life A or Life B, or do you think Life A and Life B are the same as one another?

  &lt;Question&gt;&lt;TranslatedText&gt;Alzheimer&amp;#039;s disease - Description #[no3]

  &lt;/Question&gt;&lt;/ItemDef&gt;

If you have Alzheimer&amp;#039;s disease...

1) You may be unable to do one or more of several basic chores on your
own, including eating, dressing, bathing, toileting, looking after
personal hygiene, or walking. You would probably need full-time help
with what you cannot do and you would be unable to live alone. You may
be incontinent.

2) You may experience agitated behaviour, such as struggling with the
person who is trying to bathe or dress you, even if this person is
your spouse or child. You may forget one or more important details of
your life, including your birthday, wedding anniversary, spouse&amp;#039;s
name, or your children&amp;#039;s names.

3) You may know who you are and what your name is; you might recognize
your spouse and children without knowing exactly who they are. You may
not know the day, date, or season of the year, and you may be unaware
of where you are.
4) You might be unable to go outside on your own and you may be too sick to be taken anywhere. Your ability to speak, as well as to hold and understand conversations, might be extremely limited. You are probably incapable of doing any chores or hobbies. You would probably not be able to make simple decisions like where to sit or what to do with your day.

5) You may enjoy certain foods or passive activities like listening to music.

Now consider two possible lives. In Life A, you will live in perfect health for 14 years and then you will die of natural causes. In Life B, you will live in perfect health for the next 10 years, then you will live with Alzheimer’s disease as described in the summary for another 10 years, and then you will die of natural causes.

If you have Alzheimer’s disease...
1) You may be unable to do one or more of several basic chores on your own, including eating, dressing, bathing, toileting, looking after personal hygiene, or walking. You would probably need full-time help with what you cannot do and you would be unable to live alone. You may be incontinent.
2) You may experience agitated behaviour, such as struggling with the person who is trying to bathe or dress you, even if this person is your spouse or child. You may forget one or more important details of your life, including your birthday, wedding anniversary, spouse’s name, or your children’s names.
3) You may know who you are and what your name is; you might recognize your spouse and children without knowing exactly who they are. You may not know the day, date, or season of the year, and you may be unaware of where you are.
4) You might be unable to go outside on your own and you may be too sick to be taken anywhere. Your ability to speak, as well as to hold and understand conversations, might be extremely limited. You are probably incapable of doing any chores or hobbies. You would probably
not be able to make simple decisions like where to sit or what to do with your day.

5) You may enjoy certain foods or passive activities like listening to music.

Now consider two possible lives. In Life A, you will live in perfect health for 14 years and then you will die of natural causes. In Life B, you will live in perfect health for the next 10 years, then you will live with Alzheimer's disease as described in the summary for another 10 years, and then you will die of natural causes.
Do you prefer Life A or Life B, or do you think Life A and Life B are the same as one another?

Alzheimer's disease - Description #[no3]
If you have Alzheimer's disease...
1) You may be unable to do one or more of several basic chores on your own, including eating, dressing, bathing, toiling, looking after personal hygiene, or walking. You would probably need full-time help with what you cannot do and you would be unable to live alone. You may be incontinent.
2) You may experience agitated behaviour, such as struggling with the person who is trying to bathe or dress you, even if this person is your spouse or child. Do you prefer Life A or Life B, or do you think Life A and Life B are the same as one another?
If you have Alzheimer's disease...

1) You may be unable to do one or more of several basic chores on your own, including eating, dressing, bathing, toileting, looking after personal hygiene, or walking. You would probably need full-time help with what you cannot do and you would be unable to live alone. You may be incontinent.

2) You may experience agitated behaviour, such as struggling with the person who is trying to bathe or dress you, even if this person is your spouse or child. You may forget one or more important details of your life, including your birthday, wedding anniversary, spouse's name, or your children's names.

3) You may know who you are and what your name is; you might recognize your spouse and children without knowing exactly who they are. You may not know the day, date, or season of the year, and you may be unaware of where you are.

4) You might be unable to go outside on your own and you may be too sick to be taken anywhere. Your ability to speak, as well as to hold and understand conversations, might be extremely limited. You are probably incapable of doing any chores or hobbies. You would probably not be able to make simple decisions like where to sit or what to do with your day.

5) You may enjoy certain foods or passive activities like listening to music.

Now consider two possible lives. In Life A, you will live in perfect health for 11 years and then you will die of natural causes. In Life B, you will live in perfect health for the next 10 years, then you will live with Alzheimer's disease as described in the summary for another 10 years, and then you will die of natural causes.
If you have Alzheimer’s disease...

1) You may be unable to do one or more of several basic chores on your own, including eating, dressing, bathing, toileting, looking after personal hygiene, or walking. You would probably need full-time help with what you cannot do and you would be unable to live alone. You may be incontinent.

2) You may experience agitated behaviour, such as struggling with the person who is trying to bathe or dress you, even if this person is your spouse or child. You may forget one or more important details of your life, including your birthday, wedding anniversary, spouse’s name, or your children’s names.

3) You may know who you are and what your name is; you might recognize your spouse and children without knowing exactly who they are. You may not know the day, date, or season of the year, and you may be unaware of where you are.

4) You might be unable to go outside on your own and you may be too sick to be taken anywhere. Your ability to speak, as well as to hold and understand conversations, might be extremely limited. You are probably incapable of doing any chores or hobbies. You would probably not be able to make simple decisions like where to sit or what to do with your day.

5) You may enjoy certain foods or passive activities like listening to music.

Now consider two possible lives. In Life A, you will live in perfect health for 11 years and then you will die of natural causes. In Life B, you will live in perfect health for the next 10 years, then you will live with Alzheimer’s disease as described in the summary for another 10 years, and then you will die of natural causes.
Do you prefer Life A or Life B, or do you think Life A and Life B are the same as one another?

If you have Alzheimer's disease:

1) You may be unable to do one or more of several basic chores on your own, including eating, dressing, bathing, toileting, looking after personal hygiene, or walking. You would probably need full-time help with what you cannot do and you would be unable to live alone. You may be incontinent.

Alzheimer's disease - Description 

If you have Alzheimer's disease...

1) You may be unable to do one or more of several basic chores on your own, including eating, dressing, bathing, toileting, looking after personal hygiene, or walking. You would probably need full-time help with what you cannot do and you would be unable to live alone. You may be incontinent.

2) You may experience agitated behaviour, such as struggling with the person who is trying to bathe or dress you, even if this person is your spouse or child. You may forget one or more important details of your life, including your birthday, wedding anniversary, spouse's name, or your children's names.

3) You may know who you are and what your name is; you might recognize your spouse and children without knowing exactly who they are. You may...
not know the day, date, or season of the year, and you may be unaware of where you are.

4) You might be unable to go outside on your own and you may be too sick to be taken anywhere. Your ability to speak, as well as to hold and understand conversations, might be extremely limited. You are probably incapable of doing any chores or hobbies. You would probably not be able to make simple decisions like where to sit or what to do with your day.

5) You may enjoy certain foods or passive activities like listening to music.

Now consider two possible lives. In Life A, you will live in perfect health for 10.5 years and then you will die of natural causes. In Life B, you will live in perfect health for the next 10 years, then you will live with Alzheimer's disease as described in the summary for another 10 years, and then you will die of natural causes.

2) You may experience agitated behaviour, such as struggling with the person who is trying to bathe or dress you, even if this person is your spouse or child. You may forget one or more important details of your life, including your birthday, wedding anniversary, spouse’s name, or your children’s names.

3) You may know who you are and what your name is; you might recognize your spouse and children without knowing exactly who they are. You may not know the day, date, or season of the year, and you may be unaware of where you are.

4) You might be unable to go outside on your own and you may be too sick to be taken anywhere. Your ability to speak, as well as to hold and understand conversations, might be extremely limited. You are probably incapable of doing any chores or hobbies. You would probably not be able to make simple decisions like where to sit or what to do with your day.

5) You may enjoy certain foods or passive activities like listening to music.

Now consider two possible lives. In Life A, you will live in perfect health for 8 years and then you will die of natural causes. In Life B, you will live in perfect health for the next 10 years, then you will live with Alzheimer’s disease as described in the summary for another 10 years, and then you will die of natural causes.
Do you prefer Life A or Life B, or do you think Life A and Life B are the same as one another?

If you have Alzheimer's disease...

1) You may be unable to do one or more of several basic chores on your own, including eating, dressing, bathing, toileting, looking after personal hygiene, or walking. You would probably need full-time help with what you cannot do and you would be unable to live alone. You may be incontinent.

2) You may experience agitated behaviour, such as struggling with the person who is trying to bathe or dress you, even if this person is your spouse or child. You may forget one or more important details of your life, including your birthday, wedding anniversary, spouse's name, or your children's names.

3) You may know who you are and what your name is; you might recognize your spouse and children without knowing exactly who they are. You may not know the day, date, or season of the year, and you may be unaware of where you are.

4) You might be unable to go outside on your own and you may be too sick to be taken anywhere. Your ability to speak, as well as to hold and understand conversations, might be extremely limited. You are probably incapable of doing any chores or hobbies. You would probably not be able to make simple decisions like where to sit or what to do with your day.

5) You may enjoy certain foods or passive activities like listening to music.

Now consider two possible lives. In Life A, you will live in perfect health for 6.5 years and then you will die of natural causes. In Life
B, you will live in perfect health for the next 10 years, then you will live with Alzheimer's disease as described in the summary for another 10 years, and then you will die of natural causes.

4) You might be unable to go outside on your own and you may be too sick to be taken anywhere. Your ability to speak, as well as to hold and understand conversations, might be extremely limited. You are probably incapable of doing any chores or hobbies. You would probably not be able to make simple decisions like where to sit or what to do with your day.

5) You may enjoy certain foods or passive activities like listening to music.

Now consider two possible lives. In Life A, you will live in perfect health for 3 years and then you will die of natural causes. In Life B, you will live in perfect health for the next 10 years, then you will live with Alzheimer's disease as described in the summary for another 10 years, and then you will die of natural causes.
your spouse or child. You may forget one or more important details of
your life, including your birthday, wedding anniversary, spouse's
name, or your children's names.

3) You may know who you are and what your name is; you might recognize
your spouse and children without knowing exactly who they are. You may
not know the day, date, or season of the year, and you may be unaware
of where you are.

4) You might be unable to go outside on your own and you may be too
sick to be taken anywhere. Your ability to speak, as well as to hold
and understand conversations, might be extremely limited. You are
probably incapable of doing any chores or hobbies. You would probably
not be able to make simple decisions like where to sit or what to do
with your day.

5) You may enjoy certain foods or passive activities like listening to
music.

Now consider two possible lives. In Life A, you will live in perfect
health for 3 years and then you will die of natural causes. In Life
B, you will live in perfect health for the next 10 years, then you
will live with Alzheimer's disease as described in the summary
for another 10 years, and then you will die of natural causes.

If you have Alzheimer's disease...

1) You may be unable to do one or more of several basic chores on your own, including eating, dressing, bathing, toileting, looking after personal hygiene, or walking. You would probably need full-time help with what you cannot do and you would be unable to live alone. You may be incontinent.

2) You may experience agitated behaviour, such as struggling with the person who is trying to bathe or dress you, even if this person is your spouse or child. You may forget one or more important details of your life, including your birthday, wedding anniversary, spouse's name, or your children's names.

3) You may know who you are and what your name is; you might recognize your spouse and children without knowing exactly who they are. You may not know the day, date, or season of the year, and you may be unaware of where you are.

4) You might be unable to go outside on your own and you may be too sick to be taken anywhere. Your ability to speak, as well as to hold and understand conversations, might be extremely limited. In Life B, you will live in perfect health for the next 10 years, then you will live with Alzheimer's disease as described in the summary for another 10 years, and then you will die of natural causes.
If you have Alzheimer's disease... 

1) You may be unable to do one or more of several basic chores on your own, including eating, dressing, bathing, toileting, looking after personal hygiene, or walking. You would probably need full-time help with what you cannot do and you would be unable to live alone. You may be incontinent.

2) You may experience agitated behaviour, such as struggling with the person who is trying to bathe or dress you, even if this person is your spouse or children. You may forget one or more important details of your life, including your birthday, wedding anniversary, spouse's name, or your children's names.

3) You may know who you are and what your name is; you might recognize your spouse and children without knowing exactly who they are. You may
not know the day, date, or season of the year, and you may be unaware of where you are.

4) You might be unable to go outside on your own and you may be too sick to be taken anywhere. Your ability to speak, as well as to hold and understand conversations, might be extremely limited. You are probably incapable of doing any chores or hobbies. You would probably not be able to make simple decisions like where to sit or what to do with your day.

5) You may enjoy certain foods or passive activities like listening to music.

Now consider two possible lives. In Life A, You will die of natural causes immediately. In Life B, you will live in perfect health for the next 10 years, then you will live with Alzheimer’s disease as described in the summary for another 10 years, and then you will die of natural causes.

If you have Alzheimer’s disease...
